

DID YOU KNOW?

Forest Coverage (Global)

- **CBD Framework: 30x30 Needs Integrated Landscape Action:** The UN's **30x30** target demands conserving **30%** of the planet by **2030**. However, the **Protected Planet Report 2024** shows **32%** of Key Biodiversity Areas are outside protected zones. Effective conservation requires integrated landscape management to address threats across the remaining **70%** of the landscape, balancing livelihoods, restoration, and production, as mandated by the KMGBF's targets.
- **Landscape Alliance: Rights Critical for Ecosystem Health:** Landscape Alliance emphasizes that Indigenous Peoples and local communities (IPLCs) are vital for conservation. Their research confirms that secure...

... tenure is a key predictor of success. The organization aims to bring **five million hectares** under restoration by **2030** in Sub-Saharan Africa. The study also noted wild meat is critical for over **150 million** households in the Global South, stressing the need for sustainable use over blanket bans.

- **Right Tree, Right Place Guides Ecological Restoration Choices:** The RTRP-Seed masterclass series addresses the critical need to select the correct native tree species and site for effective restoration. The **GlobUNT** tool facilitates species selection across **14,014** species in **242** countries. Experts warn against inappropriate planting, such as using invasive species. The decision process requires balancing ecological suitability with **livelihood** and local knowledge, emphasizing the importance of functional nurseries and a secure seed supply chain to move restoration from paper to practice.
